

OTS Protective Jacket™

Patent No. 314459

The patented proprietary chafe gear - OTS Protective Jacket™ - gives excellent protection against external abrasion and increases rope lifetime up to five times.

The jackets' solid construction - combined with abrasion resistant fibers - makes the best cut- and abrasion resistant cover for your ropes.

The standard color of the jacket is white, and as an option the jacket is delivered with OTS coatings in various colors.

The jacket can be combined with reflective threads for improved visibility making a High-Viz Protective Jacket. It can be braided on the whole rope length or on exposed areas where high abrasion is likely to occur.

Material: HMPE Dyneema® or Polyester.

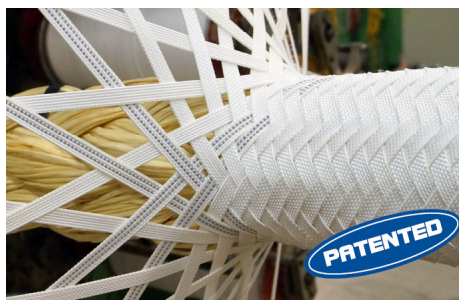

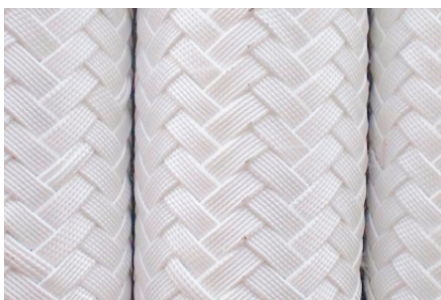

The patented OTS Protective Jacket™ is a clear winner in comparative tests performed by customers and/or 3rd parties like DNV GL.

Please contact our sales team or OTS distributors to learn more about the OTS Protective Jacket™ and how its properties can improve your arrangements' durability.

Advantages

- Protects rope from cuts and abrasion
- Increased service life
- Can be braided on entire rope or exposed areas
- Reduced rope twisting

Dextron® rope made with Dyneema®
The world's strongest fiber™
